2024 vs 2023: -0.6%	2024 vs 2023: -0.8%	2024 vs 2023: -0.0 pp	2024 vs 2023: -0.6%

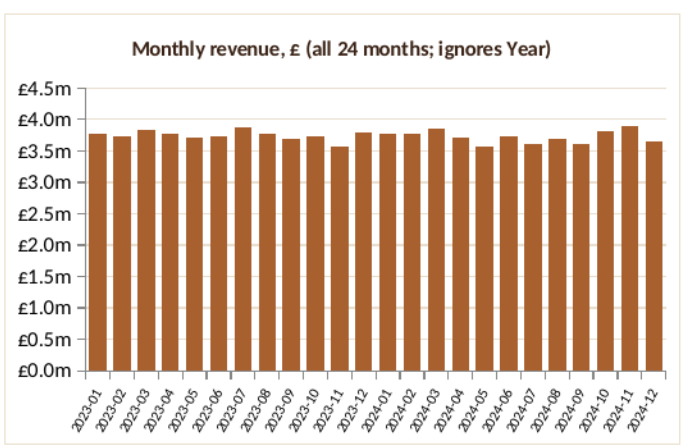

STORES WITH SUSTAINED LOSSES	FOOD SHARE OF REVENUE (SAMPLE)	RETAIL BEANS SHARE (SAMPLE)	LOYALTY REDEMPTION COST % REVENUE
6	26.1%	9.0%	1.93%
of 60 stores · 11.4% of store-months Loss / Structural · 1 in net loss	2024 vs 2023: -0.3 pp	2024 vs 2023: +0.3 pp	2024 vs 2023: +0.0 pp

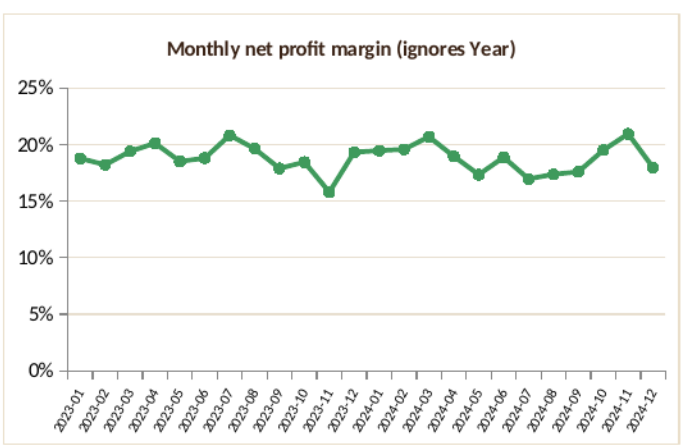

Definitions and denominators for every KPI are on 08 KPI Calculations. Margin and per-sq-ft figures are weighted (Σ ÷ Σ). Sustained loss = ≥25% of store-months in the selection Loss-Making or Structural-Loss (supplied status labels).

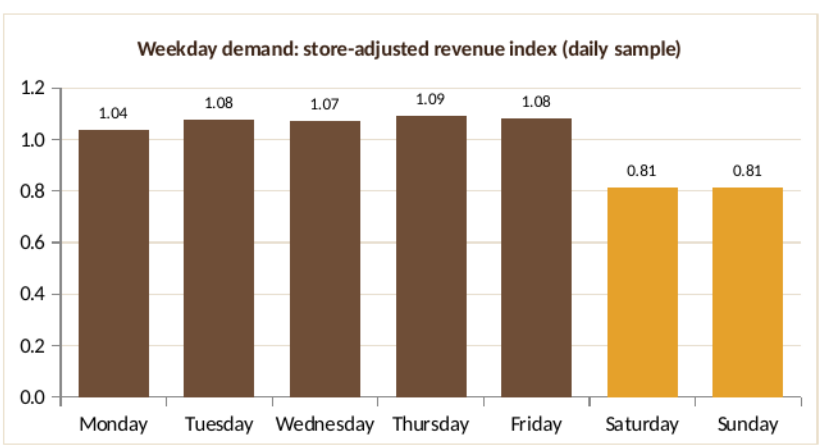

KEY FINDINGS (full period 2023–24, all stores — static text)	RECOMMENDATIONS FOR THE CCO
1. Profit is flat and uneven. Revenue £89.7m, net profit £16.9m (18.8%); 2024 vs 2023 revenue -0.6%, net profit -0.8%.	A. IMMEDIATE — Open formal reviews on the 7 flagged stores (5 in London); South London Corner is the only closure-review candidate (net loss over 24 months and in 2024). Confirm the status of 3 non-Active stores that still report revenue.
2. London is the outlier: 8.5% margin vs 18.8% estate, 26% of store-months in loss, rent ≈19% of revenue. Northern Ireland leads (28.4%, 3 stores).	B. IMMEDIATE — Flex weekend and bank-holiday staffing to demand; revenue per staff hour falls ~25% on those days.
3. Cost structure, not revenue, separates stores: staffing cost vs margin r = −0.79; rent vs revenue r = +0.15 — higher rent does not buy higher sales.	C. 2025 SITES — Favour regions combining margin and scale (East of England, Yorkshire & Humber, West Midlands; Wales and N. Ireland on margin); defer London expansion until rent and staffing models are fixed. Treat region evidence as indicative (3–7 stores each).
4. Loyalty: adoption drives member share (r = 1.00) but not basket size, margin or revenue (r ≈ 0). Redemption cost is 1.9% of revenue; incrementality is unproven.	D. LOYALTY — Maintain; refine redemption economics in low-adoption stores; run a controlled test before expanding spend.
5. Food share is not growing (26.2% → 25.9%); retail-beans +0.3 pp is within noise. Catalogue margins (68–88%) overstate realised margin (63%).	E. STRATEGIC — Do not assume food or beans growth; capture unit and product-level sales to measure real product margins.
6. Weekends trade ~24% below weekdays and bank holidays ~39% below comparable days, yet staffing is flat. Month-of-year patterns did not repeat 2023→2024.	F. DATA — Resolve status-label definition (£ vs %), duplicated daily records and missing store formats before the next cycle.

Caveats: dataset has no Retail-Park stores and only 2 Transport-Hub stores (both Luton); profitability_status labels follow £ net-profit cut-offs, not the documented margin cut-offs; the daily table is a ~20% sample of store-days with duplicate keys. See 11 Data Quality.
